

100 AI Prompts

Top-Notch Outputs — A Practical Prompt Engineering Collection

Stop asking AI vague questions. Give it better instructions.

This collection contains 100 reusable prompts designed to improve the quality, structure, precision and usefulness of AI outputs across writing, business, research, coding, creativity, productivity and professional work.

How to Get the Best Results

- 1. Replace the brackets.** Anything like [TOPIC], [PRODUCT] or [TASK] is a variable you should customize.
- 2. Add context.** AI output improves dramatically when you provide the audience, goal, constraints and relevant source material.
- 3. Ask for quality control.** Prompts that include checking, assumptions, evidence and edge cases generally produce more useful results.
- 4. Iterate.** Treat the first output as a draft. Ask the AI to critique it, identify weaknesses and improve it.

The prompts below are deliberately reusable. They are frameworks, not magic words: the quality of your inputs still matters.

1. Universal Master Prompts

1. The Expert Brief

Act as a world-class expert in [FIELD]. First identify the exact outcome I need, then build the answer from first principles. State assumptions, separate facts from estimates, avoid generic advice, and give practical examples. Before finalizing, silently check the response for gaps, contradictions and unnecessary filler.

2. Deep Research Architect

Research and explain [TOPIC] for an intelligent reader who wants depth rather than a surface summary. Organize the answer into context, key facts, competing explanations, evidence, practical implications and open questions. Flag uncertainty instead of inventing details.

3. Precision Answer

Answer this question: [QUESTION]. Start with the direct answer, then explain why. Define any technical terms, give one concrete example, identify important exceptions, and finish with a concise takeaway. Do not pad the answer.

4. Critical Thinker

Analyze [ISSUE] from multiple relevant perspectives. Identify assumptions, strongest arguments on each side, evidence quality, trade-offs and what would change the conclusion. Do not force false balance when evidence is uneven.

5. Quality Controller

Review the following output for factual errors, vague wording, unsupported claims, logical gaps, repetition and missed requirements: [TEXT]. Return a corrected version and a short list of the most important changes.

6. Decision Framework

Help me evaluate [DECISION]. Build a neutral decision framework with criteria, measurable questions, risks, costs, benefits, dependencies and unknowns. Do not decide for me; make the trade-offs easy to understand.

7. First-Principles Breakdown

Explain [TOPIC] from first principles as if rebuilding the concept from scratch. Start with the basic building blocks, show how they connect, then move to advanced implications and a practical example.

8. Teach Me Properly

Teach me [TOPIC] in a structured progression from beginner to advanced. Use simple explanations first, then technical detail, examples, mini exercises and common misconceptions.

9. Turn Chaos Into Structure

Transform these rough notes into a clear, logically ordered document without losing useful information: [NOTES]. Identify missing information separately rather than silently making it up.

10. Gold-Standard Output

Produce the highest-quality possible answer to [TASK]. Prioritize correctness, specificity, useful structure, actionable detail and clean writing. Before answering, internally check every requirement against the final response.

2. Writing & Communication

11. Professional Rewrite

Rewrite the following text so it sounds polished, confident and natural while preserving the original meaning: [TEXT]. Remove repetition, awkward phrasing and unnecessary words.

12. Persuasive but Honest

Write persuasive copy for [OFFER/IDEA] using a clear problem, consequence, solution, benefits, proof and call to action. Do not use fake scarcity, fabricated testimonials or unsupported claims.

13. Executive Email

Draft a concise executive-level email about [SUBJECT]. Make the purpose obvious in the first paragraph, include only relevant context, specify the requested action and end professionally.

14. Human-Sounding Copy

Rewrite [TEXT] so it sounds like a thoughtful human wrote it—not a template. Vary sentence length, use natural transitions and specific language, and remove corporate clichés.

15. Long-Form Article

Write a deeply useful article about [TOPIC]. Start with a compelling premise, build a logical narrative, use concrete examples and practical sections, address objections, and end with actionable takeaways.

16. Headline Generator

Generate 25 strong headlines for [TOPIC]. Mix curiosity, benefit, specificity, contrarian framing, numbers and direct promises. Avoid clickbait that the content cannot satisfy.

17. Clarity Editor

Edit [TEXT] for maximum clarity. Preserve the author's voice and meaning. Replace vague words with precise ones, shorten bloated sentences, improve transitions and flag claims that need evidence.

18. Storytelling Framework

Turn [RAW MATERIAL] into a compelling story with a clear protagonist, goal, obstacle, turning point, consequence and takeaway. Keep details truthful to the source.

19. Explain Simply

Explain [COMPLEX TOPIC] to a smart beginner using plain language, analogies and one concrete example. Do not oversimplify the core concept.

20. Tone Transformer

Rewrite [TEXT] in these tones: authoritative, friendly, premium, concise and conversational. Preserve the facts while changing only the communication style.

3. Business & Strategy

21. Business Model Builder

Design a realistic business model for [BUSINESS IDEA]. Cover customer, problem, value proposition, acquisition, delivery, pricing, costs, revenue, operations, risks and first 30 days.

22. Customer Persona

Build evidence-based customer personas for [PRODUCT]. For each, identify job-to-be-done, pain points, objections, triggers, buying criteria and language they actually use. Label assumptions.

23. Offer Design

Turn [PRODUCT/SERVICE] into a compelling offer. Define the core promise, deliverables, bonuses if useful, risk reducers, pricing logic and what should NOT be promised.

24. Competitive Analysis

Analyze the competitive landscape for [MARKET]. Compare business models, positioning, customer segments, strengths, weaknesses, gaps and differentiation opportunities. Separate observable facts from inference.

25. Go-to-Market Plan

Create a 90-day go-to-market plan for [PRODUCT] with target customer, positioning, channels, weekly actions, budget assumptions, metrics and decision points.

26. Pricing Strategist

Evaluate pricing options for [PRODUCT/SERVICE]. Give 3–5 pricing structures, what each communicates, likely objections, unit economics to monitor and what information is still needed.

27. Operations SOP

Create a detailed SOP for [PROCESS]. Include purpose, scope, roles, prerequisites, step-by-step procedure, quality checks, exception handling, escalation and completion criteria.

28. Business Risk Audit

Stress-test this business idea: [IDEA]. Identify operational, financial, legal/compliance, customer, technology and reputational risks, then propose practical mitigations.

29. 30-Day Validation

Create a low-cost 30-day validation experiment for [IDEA]. Define hypotheses, tests, target users, metrics, thresholds, daily/weekly actions and what results would justify changing the idea.

30. Strategic Roadmap

Create a 12-month roadmap for [GOAL]. Divide it into phases with priorities, dependencies, milestones, measurable outcomes and explicit things to postpone.

4. Marketing & Sales

31. Marketing Strategy

Create a marketing strategy for [PRODUCT] targeting [AUDIENCE]. Cover positioning, message hierarchy, content pillars, acquisition channels, conversion path, retention and metrics.

32. Landing Page Copy

Write complete landing-page copy for [PRODUCT]. Include headline, subheadline, problem, agitation without fearmongering, solution, benefits, proof placeholders, FAQ, objections, CTA and concise disclaimer where needed.

33. Ad Variations

Create 20 ad concepts for [PRODUCT]. Each must use a distinct angle such as pain point, aspiration, curiosity, proof, comparison, simplicity, speed or cost. Do not invent proof.

34. Sales Script

Create a consultative sales script for [PRODUCT]. Include opening, discovery questions, diagnosis, recommendation, objection handling and close. Avoid manipulative pressure.

35. Objection Handler

List the 20 most likely objections to [OFFER] and give honest, concise responses. If an objection reveals a genuine limitation, acknowledge it rather than hiding it.

36. Email Sequence

Create a 7-email sequence for [PRODUCT] covering awareness, education, problem recognition, solution, proof, objections and offer. Keep every email useful even if the reader does not buy.

37. Brand Positioning

Develop positioning for [BRAND]. Define target audience, category, differentiated value, proof points, personality, messaging pillars and examples of what the brand should never say.

38. Customer Interview

Write a customer-discovery interview for [PRODUCT IDEA] designed to uncover real behavior rather than solicit compliments. Include follow-up questions and what signals to listen for.

39. Conversion Audit

Audit this sales page for clarity, trust, friction, information hierarchy, objections and CTA strength: [PAGE]. Give prioritized improvements and rewritten examples.

40. Content Strategy

Build a 60-day content strategy for [BRAND] with content pillars, formats, audience intent, posting ideas, repurposing system and measurable goals.

5. Productivity & Personal Work

41. Weekly System

Design a practical weekly operating system for [GOALS]. Include priorities, recurring tasks, deep-work blocks, admin, review ritual and a method for handling unexpected work.

42. Project Planner

Turn [PROJECT] into a complete project plan with outcome, scope, deliverables, milestones, dependencies, owners, risks, checklist and definition of done.

43. Meeting Optimizer

Create an agenda for a [MEETING TYPE] that minimizes wasted time. Include desired decisions, pre-read, time boxes, owners and follow-up actions.

44. Prioritization Matrix

Prioritize these tasks: [TASKS]. Use impact, urgency, effort, dependency and consequence. Explain the resulting order without pretending the scoring is objective.

45. Habit Designer

Design a sustainable habit system for [HABIT]. Include trigger, smallest useful action, environment design, tracking, recovery after missed days and progression.

46. Learning Plan

Create a 30-day learning plan for [SKILL] assuming [TIME] per day. Mix concepts, deliberate practice, projects, feedback and spaced review.

47. Decision Journal

Create a decision-journal template for [DECISION TYPE] that captures context, assumptions, alternatives, expected outcomes, confidence and later review.

48. Time Audit

Analyze this schedule [SCHEDULE]. Identify low-value activities, hidden context switching, bottlenecks and realistic opportunities to recover time. Do not assume every free slot should become work.

49. Focus Coach

Help me convert this overloaded task list into today's realistic plan: [TASKS]. Protect the highest-value work, batch shallow tasks and identify what can be deferred or dropped.

50. Personal Knowledge System

Design a simple system to capture, organize, retrieve and review knowledge about [DOMAIN] using notes, tags, summaries and periodic review.

6. Coding & Technology

51. Senior Developer

Act as a senior software engineer. Design a robust solution for [PROBLEM]. Explain architecture, data flow, edge cases, security concerns, testing strategy and trade-offs before showing implementation.

52. Code Review

Review this code as a senior engineer: [CODE]. Find correctness bugs, security issues, performance problems, maintainability issues and unnecessary complexity. Provide a corrected version where useful.

53. Debugging

Debug this problem: [ERROR + CODE + EXPECTED BEHAVIOR]. Identify the most likely root cause, explain the reasoning, propose the smallest reliable fix and give a test that proves it.

54. Architecture

Design a production-ready architecture for [APP]. Include components, data model, APIs, authentication, storage, background jobs, observability, scaling assumptions and failure modes.

55. Database Design

Design a database schema for [SYSTEM]. Define entities, relationships, keys, constraints, indexes and example queries. Explain important normalization or performance trade-offs.

56. API Design

Design a clean API for [PRODUCT]. Define endpoints, request/response examples, authentication, validation, errors, pagination, idempotency and versioning.

57. Security Review

Perform a security review of [SYSTEM/DESIGN]. Check authentication, authorization, input handling, secrets, data exposure, dependencies, logging and common attack surfaces. Distinguish confirmed issues from possibilities.

58. Test Engineer

Create a comprehensive test plan for [FEATURE]. Cover happy paths, edge cases, validation, integration, failure recovery, security and regression testing.

59. Refactor Safely

Refactor this code [CODE] for readability and maintainability while preserving behavior. Explain any behavior-sensitive changes and provide tests that protect against regressions.

60. Build Specification

Turn this product idea into a developer-ready specification: [IDEA]. Include requirements, user stories, acceptance criteria, non-functional requirements, data model, integrations and phased delivery.

7. Research, Analysis & Data

61. Research Brief

Create a research brief on [TOPIC] covering the question, scope, key findings, evidence quality, disagreements, limitations and implications. Never invent sources.

62. Fact Checker

Fact-check these claims: [CLAIMS]. For each, classify as supported, contradicted, misleading or unverifiable based only on available evidence, and explain what evidence is needed.

63. Data Analyst

Analyze this dataset/context: [DATA]. Identify trends, outliers, relationships, missing data and limitations. Distinguish correlation from causation and suggest useful next analyses.

64. Survey Designer

Design a high-quality survey to understand [QUESTION]. Avoid leading questions, double-barreled wording and unnecessary questions. Include response formats and a short analysis plan.

65. Research Questions

Generate 20 high-value research questions about [TOPIC], grouped by importance and feasibility. Explain why each question matters.

66. Compare Options

Compare [OPTION A], [B], [C] across the criteria that actually matter for [USE CASE]. Use evidence where available, show trade-offs and identify missing information.

67. Trend Analysis

Analyze the trend of [TOPIC] over [TIME PERIOD]. Separate established data from interpretation, identify structural drivers and explain what could invalidate the analysis.

68. Report Writer

Turn these findings into an executive report: [FINDINGS]. Include executive summary, methodology, key findings, implications, limitations and recommended next questions.

69. Root Cause Analysis

Investigate this problem: [PROBLEM]. Use a structured root-cause method, distinguish symptoms from causes, identify evidence needed and propose corrective actions.

70. Scenario Planning

Build 3 plausible scenarios for [SITUATION] over [TIME HORIZON]. For each, identify assumptions, drivers, early indicators, implications and actions that remain useful across scenarios.

8. Creative & Ideation

71. Idea Generator

Generate 50 original ideas for [GOAL]. Group them by concept, avoid duplicates, and make each idea concrete enough to execute. Highlight the assumptions behind unusual ideas.

72. Creative Director

Develop a creative direction for [PROJECT]. Define concept, mood, visual language, composition, typography, references, do/don't rules and examples.

73. World Builder

Build a coherent fictional world around [PREMISE]. Define geography, society, economics, technology, history, conflicts and rules, ensuring internal consistency.

74. Character Designer

Create a multidimensional fictional character for [STORY]. Include motivation, contradictions, strengths, weaknesses, relationships, backstory, voice and arc.

75. Plot Architect

Design a compelling plot for [PREMISE] with setup, escalating complications, midpoint shift, crisis, climax and resolution. Avoid predictable twists unless justified.

76. Brainstorm Better

Take this ordinary idea [IDEA] and produce 20 stronger variations using inversion, combination, exaggeration, simplification, constraint and unexpected audience perspectives.

77. Creative Critic

Critique this creative concept [CONCEPT] for originality, clarity, emotional impact, coherence and execution risk. Give specific improvements, not generic praise.

78. Naming Studio

Generate 50 names for [BRAND/PRODUCT]. Group by style, explain the idea behind each, and flag names that may be confusing, generic or difficult to pronounce.

79. Visual Prompt Engineer

Write a highly detailed image-generation prompt for [SCENE]. Specify subject, environment, composition, camera, lighting, materials, mood and visual hierarchy while avoiding unnecessary adjectives.

80. Concept Expansion

Expand [ONE-SENTENCE IDEA] into a complete creative concept with premise, audience, hook, structure, distinctive elements, execution plan and three alternate directions.

9. Career, Documents & Professional Growth

81. CV Optimizer

Rewrite my CV for [ROLE] using only truthful information from [CV]. Prioritize measurable impact, relevant skills and clear achievements. Do not invent metrics or responsibilities.

82. Interview Coach

Prepare me for an interview for [ROLE]. Generate likely questions, strong answer structures, role-specific technical questions, behavioral questions and thoughtful questions I can ask.

83. Achievement Extractor

Analyze this work history [TEXT] and extract accomplishments, ownership, improvements, leadership examples, measurable outcomes and transferable skills.

84. Career Gap Analysis

Compare my current profile [PROFILE] with this target role [JOB DESCRIPTION]. Identify strengths, missing skills, evidence gaps and a practical learning/project plan.

85. Professional Bio

Write a concise professional bio from these facts: [FACTS]. Produce versions for LinkedIn, website, speaker introduction and short profile without inventing achievements.

86. Proposal Writer

Create a professional proposal for [PROJECT]. Include client objective, understanding, approach, deliverables, timeline, assumptions, exclusions, pricing placeholders and next steps.

87. Performance Review

Turn these work notes [NOTES] into a factual performance summary emphasizing outcomes, responsibilities, improvements and development goals.

88. Negotiation Preparation

Prepare me for a negotiation about [SITUATION]. Identify interests, priorities, alternatives, questions, evidence, possible objections and respectful responses.

89. Professional Message

Write a concise professional message about [SITUATION]. Make it clear, polite and appropriately assertive, with the requested action and deadline if relevant.

90. Portfolio Project

Design a portfolio project that demonstrates [SKILL] to employers/clients. Include objective, scope, deliverables, technical/creative choices, evaluation criteria and presentation structure.

10. AI Output Optimization

91. Prompt Improver

Improve this prompt for maximum useful output: [PROMPT]. Preserve the intent, remove ambiguity, add missing constraints, define the desired format and include a quality-control instruction.

92. Prompt With Constraints

Create a prompt for [TASK] that explicitly defines objective, audience, context, inputs, constraints, output format, quality criteria and failure conditions.

93. Iterative Workflow

Design a multi-step AI workflow for [TASK]. Break it into separate prompts for research, drafting, critique, correction and finalization so each stage has a clear purpose.

94. Self-Critique Loop

After producing an answer to [TASK], evaluate it against these criteria: correctness, completeness, specificity, usefulness, clarity and compliance with instructions. Then revise only the weak areas.

95. Expert + Skeptic

Answer [QUESTION] in two passes: first as a domain expert building the strongest answer, then as a skeptical reviewer trying to find errors, hidden assumptions and unsupported claims. Produce a final corrected answer.

96. Input Normalizer

Turn messy input into structured information for an AI workflow. Extract facts, goals, constraints, unknowns and required outputs from: [INPUT]. Never fill unknowns with guesses.

97. Output Formatter

Take [CONTENT] and format it exactly as: [FORMAT]. Preserve factual content, use consistent hierarchy, remove duplication and ensure every required field is present.

98. Specificity Booster

Rewrite this generic answer [ANSWER] to make it concrete. Replace vague advice with examples, numbers where justified, decision rules, templates and next actions. Do not fabricate facts.

99. Hallucination Guard

Answer [QUESTION] using only information supported by the provided context: [CONTEXT]. Clearly label unknowns and assumptions. If the evidence is insufficient, say what is missing.

100. Final Master Prompt

For [TASK], create a reusable master prompt containing: role, objective, context, inputs, constraints, process, output format, quality criteria, edge cases and final self-check. Make it copy-paste ready.
